Attracting a worldwide audience, CBMS is the **premier conference** for computer-based medical systems, and one of the main conferences within the fields of medical informatics and biomedical informatics. CBMS allows the exchange of ideas and technologies between academic and industrial scientists. The scientific program of IEEE **CBMS 2023** will consist of regular and special track sessions with technical contributions reviewed and selected by an international program committee as well as keynote talks, and tutorials given by leading experts in their fields. The IEEE **CBMS 2023** edition also aims to host high-quality papers about **industry** and real case applications as well as allow researchers leading international projects to show to the scientific community the main aims, goals, and results of their projects. To this end, we have organized a specific **Projects and Industry Track**.

We also solicit industry sponsorships to promote products, processes, and services they propose.
